Professional Summary

Final-year B.Tech Computer Science and Engineering (Artificial Intelligence) student with a CGPA of 8/10, focused on Java full-stack development. Experienced building backend systems with Java, Spring Boot, and PostgreSQL, and full-stack applications with React and JavaScript. Led a team on a facial-recognition-based attendance management system as a final-year capstone project, with a strong foundation in data structures and algorithms.

Education

Bachelor of Technology, Computer Science and Engineering (Artificial Intelligence) Dec 2022 – Jul 2026
Pranveer Singh Institute of Technology, Kanpur, India (affiliated with AKTU, Lucknow) — CGPA: 8/10.00

Senior Secondary (Class XII), CBSE 2021 – 2022
Welfare Mission International School, Kanpur, India — Aggregate: 62.4%

High Secondary (Class X), CBSE 2019 – 2020
Welfare Mission International School, Kanpur, India — Aggregate: 83.6%

Technical Skills

Languages: Java, Python, C++, SQL, JavaScript

Frontend: React, HTML5, CSS3

Backend: Spring Boot, Spring, Flask, Node.js, REST APIs, JDBC, JdbcTemplate

Databases: PostgreSQL, MySQL, SQLite

Core CS: Data Structures & Algorithms, OOP, Collections, Exception Handling, Multithreading, Operating Systems, DBMS

Tools: Git, GitHub, VS Code, IntelliJ IDEA, Postman

Projects

ATTEND AI — Smart Attendance System (Face Recognition) 2025 – 2026
Python, Flask, OpenCV, face_recognition, dlib, NumPy, SQLite, SQLAlchemy
[GitHub Repository](#) | [Live Demo](#)

- Led a team as project lead to develop a facial-recognition-based attendance management system as the final-year capstone project.
- Engineered real-time face detection and recognition using OpenCV, building a login system, lecture scheduling, and a matrix-style attendance dashboard.
- Corrected the face encoding pipeline using OpenCV's Haar Cascade with explicit known_face_locations, and resolved a broken dlib wheel by upgrading to dlib 20.0.0.
- Automated attendance logging with timestamps and generated attendance records.

Banking System — Spring Boot REST API 2025 – 2026
Java, Spring Boot, PostgreSQL, Spring Data JPA, JDBC/JdbcTemplate
[GitHub Repository](#)

- Built a backend banking system supporting authentication, account management, deposits, withdrawals, transfers, and transaction tracking.
- Implemented Spring Data JPA and JDBC/JdbcTemplate for PostgreSQL database operations and transaction reporting.
- Implemented exception handling, transaction management, and concurrency control, plus asynchronous report processing using thread pools.

MyMeal — Food Ordering Web Application 2024 – 2025
Flask, JavaScript, HTML, CSS
[GitHub Repository](#) | [Live Demo](#)

- Built a full-stack food ordering platform supporting menu browsing, cart management, and order placement.
- Designed a session-based cart system without a database for lightweight order simulation.
